

COMPLIANCE AND SECURITY

Cybersecurity for Executives in the AI Era

DURATION

Half day

AUDIENCE

Board

LANGUAGE

Polish or English

FORMAT

On site or online

Threat awareness at the decision level: deepfakes, AI-assisted social engineering and the risks of employees using AI tools. A vivid, example-driven session that ends with a concrete plan, not with fear.

WHAT WE COVER

- The threat picture now: what AI changed for attackers, shown on real cases
- Deepfakes and voice cloning: the executive fraud scenarios that already work
- AI-assisted social engineering: why your best people fall for it
- Shadow AI: what employees paste into public tools and what leaves with it
- Your role in an incident: the decisions only executives can make, and making them fast
- The plan: priority actions for your organisation, agreed in the room

YOU LEAVE WITH

- A personal exposure check for executive fraud scenarios
- A priority action list for your organisation, agreed during the session
- A one-page incident decision guide for the executive team

WHO IT IS FOR

Management boards and executive teams. Vivid and example-driven by design, closing with a concrete plan rather than fear. Works well before budget season.
