

LEADERSHIP AND TEAMS

IT and Business: Shared Ownership of the Product

DURATION

1 day

AUDIENCE

IT + Business

LANGUAGE

Polish or English

FORMAT

On site or online

How to build shared understanding of requirements and processes in mixed teams of developers, client and operations. Based on proven work with such teams and 800+ people trained. Reduces the friction at the interface that costs the most.

WHAT WE COVER

- Where the friction comes from: two languages, two clocks, one product
- Requirements as conversation: examples, acceptance and the questions that prevent rework
- Process literacy for developers, technical literacy for the business: the minimum each side needs
- Shared ownership in practice: decisions, priorities and who says no
- Handovers that do not lose meaning: from business need to backlog and back
- Joint case work: mixed groups solve a realistic product situation together

YOU LEAVE WITH

- A working agreement template for a mixed business and IT team
- A requirements conversation format that prevents the most expensive rework
- A shared vocabulary tested during the joint exercises

WHO IT IS FOR

Mixed groups by design: developers, analysts, product owners and their business counterparts attending together. Based on proven work with such teams and 800+ people trained.
